

# 21-61 QA Engineer

**Location:** Belgium - Bruges / on site

## About this job:

You will be responsible for software testing, planning, design, scripting and execution and defect reporting. You will interact with project management and development teams to develop a strong understanding of the project and testing objectives and (aid to) design and create test conditions and scripts to address business and technical use cases.

## What you'll do:

- Reading functional specifications of the new software features and analysing requirements documentation.
- Creation of test design and testcases according to the functional specifications and the requirement documentation.
- Test the software as a whole (existing software extended with new features) and identifying deficiencies.
- Performing frontend and backend testing: functional, regression, UI, Soap and Rest API, performance and security testing
- Track the results of the testing.
- Set up test environments.
- Developing automatic test cases.
- Writing test reports and issue reports.
- Participating in daily standup meetings for project status update.
- Ensure timely delivery of results, in accordance to Release and Deployment planning.
- Participate in root cause identification and resolution.

## About you:

- Has fluent oral and written communication skills in English.
- Has 4 years of minimum experience in Testing.
- Holds an ISTQB Certification or any other Quality Assurance certification.
- Has strong programming fundamentals.
- Is capable of writing and executing manual tests.
- Assumes responsibility for their work, accepts direction and feedback from colleagues and managers.
- Likes to solve problems with attention to detail.
- Likes to team up with colleagues from all over the world.
- Suggests solutions to identified product problems.
- Is always looking to support continuous improvement of the overall Software Development Life Cycle.
- Is curious and willing to learn.
- Is open for continuous education.
- Is able to think critically and creatively.
- Mandatory Knowledge: XML, Soap, REST, Relational databases, SQL (MS SQL Server).

- Programming Language: C#, Python, JavaScript or other
- Tools: SoapUI, Postman, MS SQL management studio, Docker, Browser stack
- A Plus – knowledge of: Windows services, Webservices, Docker, Event-Driven applications testing
