

21-38a Functional Analyst

Location: Bruges, Belgium

About this job:

As a Functional Analyst you actively participate in the development of our new products and services. We develop our cloud software communications solutions in an agile and dynamic environment, and we constantly strive to use the best technologies to achieve our purpose – opensource is what we like the most! We are looking for a highly motivated and talented analyst who is passionate about designing customized solutions.

What you'll do:

- Detect and recognize needs and wishes concerning software applications, proposed by customer/project manager.
- Translate the needs into requirements by formulating a functional analysis (describe features illustrated with the necessary wireframes, describe impact on existing features and processes, explain non-functional requirements.)
- Assess the functional analysis against the criteria of the functional design team, client, project manager and R&D team.
- Inform R&D and test teams about the new/changed requirements, review the technical analysis, follow-up and control of the development and test cycle.
- Guide and train customers as well as the operational and support teams regarding the new software releases.
- Be attentive for market developments and contribute to the selection of new products.
- Analyze data, captured by the team, and identify trends to help the business.
- Provide high level support to the development teams regarding tools, infrastructure, and platform.

About you:

- You preferably have a first successful experience as Functional-Analyst and/or experience in the telecom sector.
- You hold a Bachelor's/Master's degree in a computer science-technical direction, or you are a graduate/industrial engineer with solid knowledge of computer science. You can look back on several years of experience in a company's web agency or web department or you have experience as an analyst or designer of websites.
- You are familiar with wireframes.
- You have a good basis for user-friendly web design and best practices on the web.
- You have a keen interest in specific telecom knowledge (voice, data, messaging, VoIP).
- You have experience in consultancy assignments in ICT where you often have to draw up technical documents.
- You like to take initiative and are effortlessly flexible.
- You possess a dynamic and driven personality.
- As an analytical person, you are able to think out-of-the-box and show your creativity.
- You speak and write fluently in the English language.

Do you want this job, and do you have the required skills and experience?

Then we invite you to send your resume/cv and cover letter, both in English, to Recruiting@Pareteum.com. Please include the job number and title in the subject line of your email.
